## Scavenger Alkaline Phosphatase (Inactivated) from calf intestine

**S1492992**

---

**Storage:** 2-8°C.

### **Introduction:**

Scavenger Alkaline Phosphatase (Inactivated) is a solution for minimizing & eliminating non-specific binding and interference in immunoassays. Scavenger ALP is a substance used in Immunoassays to minimize or eliminate non-specific binding and interference caused by unwanted molecules present in the samples. Adding Scavenger ALP improves the specificity, sensitivity, and reliability of assay results. Scavenger ALP can be used in various Clinical Diagnostic Immunoassays, including ELISA, Western blotting, Immunohistochemistry, Flow Cytometry, etc.

### **Specifications:**

Source: Calf Intestine.

Contaminants: Alkaline phosphatase  $\leq 0.005$  U/mg protein.

### **Applications:**

Our Inactivated Scavenger Alkaline Phosphatase (sALP) works as an interference-eliminating substance in chemiluminescence immunoassays.
