

Immunol Staining (Non-fluorescence) Secondary Antibody Dilution Solution

I752109

Store at 2-8 °C

Introduction:

Immunol Staining (Non-fluorescence) Secondary Antibody Dilution Buffer can be used for dilution and preparation of secondary antibodies during non-fluorescence Immunol staining.

The secondary antibody diluted in this product can be reused 3-5 times within 1-2 weeks.

The main active ingredients in this product are BSA, detergent and secondary antibody stabilization reagent, which are diligently optimized to reduce non-specific bindings of secondary antibody as well as enhance the stability of diluted secondary antibodies.

Usage method:

Dilute the secondary antibody with this product at an appropriate ratio according to manufacture's instructions of the antibody used and the content of target protein in samples. The diluted secondary antibody can be recovered and stored at 4 °C for later use in Immunostaining.

Matters needing attention:

1. This product is sterilized by filtration and should be used aseptically. Once opened, it should be used within one month and should be discarded when there is any precipitation or microbial contamination.
2. This product is for R&D only. Not for drug, household, or other uses.
3. For your safety and health, please wear a lab coat and disposable gloves during the operation.
