

Immunostaining Secondary Antibody Dilution Buffer

I752114

Store at 2~8°C

Introduction:

Immunol Fluorescence Staining Secondary Antibody Dilution Buffer can be used for dilution and preparation of secondary antibodies during immunostaining experiments such as immunohistochemistry and immunocytochemistry.

Usage method:

1. Dilute the secondary antibody at an appropriate ratio (e.g., 1:1000 and 1:500), according to manufacturer's instructions of the antibody used and the content of target protein in samples.
2. The diluted secondary antibody can be recovered and stored at 4°C for later use in Immunostaining.
3. choose the appropriate color reagent for color development.

Matters needing attention:

1. This product has been filtered, once started, it is recommended to use within one month, if found precipitate please discard.
2. This product is for R&D only. Not for drug, household, or other uses.
3. For your safety and health, please wear a lab coat and disposable gloves during the operation.
